Technical Advisory Committee (TAC) Meeting
Marion County Public Library- Meeting Room B
2720 E. Silver Springs Blvd. Ocala, FL 34470
3:30 PM

MINUTES

Members Present:

Ji Li (Steven Neal attended for Ji Li arrived at 3:34pm)
Tyler Burgett
Bob Titterington
Kenneth Odom
Mickey Thomason
Eric Smith
Loretta Shaffer
Elton Holland
Troy Slattery (arrived at 3:41pm)

Members Not Present:

Dave Herlihy

Others Present:

Rob Balmes
Liz Mitchell
Shakayla Irby
Sarah McNamara, FDOT
Franco Saraceno, Kittelson & Associates (via WebEx)
**Item 1. Call to Order and Roll Call**

Chairman Mickey Thomason called the meeting to order at 3:30pm and Secretary Shakayla Irby called the roll, there was a quorum present.

**Item 2. Proof of Publication**

Secretary Shakayla Irby stated the meeting had been published online to the TPO’s website, as well as the City of Ocala, Belleview, Marion County, and Dunnellon’s websites on February 1, 2022. The meeting had also been published to the TPOs Facebook and Twitter pages.

**3A. Transportation Resilience Guidance Paper**

The TPO had been supported by Kittelson and Associates to complete the guidance paper on transportation resilience. The main purpose of the paper was to help better educate and inform the TPO about transportation resilience. The paper also provided consideration for how to integrate resilience into future transportation planning, and opportunities at the state and federal levels of government for grants and funding.

Transportation Resiliency was the ability to adapt to changing conditions and recovery from disruptions, such as major weather events. The impacts from both natural and human-related events could have significant and unexpected impacts to the Ocala/Marion transportation system.

Franco Saraceno, Kittelson and Associates, provided a presentation at the meeting to share highlights from the guidance paper and considerations for next steps.

Mr. Odom said that resiliency had been handle through the Department of Emergency Management (DEM) and inquired who would be handling resiliency for roadways.

Mr. Saraceno said that he believed DEM would still take the lead but he would find out about the management of the program and get back with a response.

*The presentation that was given is attached to pages 6-25 of this set of minutes for reference.*

**Item 4A. Performance Management Safety Targets**

Mr. Balmes presented on the Performance Management Safety Targets.

The Moving Ahead for Progress in the 21st Century Act (MAP-21) required State DOTs and TPOs/MPOs to conduct performance-based planning by tracking performance measures and setting data-driven targets to improve those measures.

The first of the performance measures that became effective in 2016 was assessing the conditions of roadway safety – PM1. By May 2018, all TPO/MPO’s were required to establish safety targets and approve or update on an annual basis.
Specifically, the Ocala Marion TPO was required to update and adopt **Targets** for **five** required **Safety Performance Measures** established under MAP-21. For the current year, the TPO had to submit Safety targets to the Florida Department of Transportation (FDOT) no later than February 25, 2022.

There were five required safety performance measures:

1. Fatalities- Total number of fatalities involving a motor vehicle crash
2. Fatalities (Rate) - Rate of fatalities per 100 Million Vehicle Miles Traveled (VMT)
3. Serious Injuries- Total number of serious injuries involving a motor vehicle crash
4. Serious Injuries (Rate) - Rate of serious injuries per 100 Million Vehicle Miles Traveled (VMT)
5. Non-Motorized Fatalities & Serious Injuries- Number of non-motorized fatalities and number non-motorized serious injuries involving a motor vehicle crash

On an annual basis, the TPO had the opportunity to select one of two options regarding updating and submission of safety targets.

1. Adopt the state targets established by FDOT.
2. Develop its own quantifiable safety performance targets.

If the TPO were to adopt state targets, it was required to annually adopt the same targets until changes were made by FDOT.

Presently, the FDOT had adopted 0 for each of the five safety targets.

In 2018, when the process became a federal requirement, the TPO Board adopted its own specific safety performance targets to better track progress and reflect more accountability to the public. The targets reflected specific crash data for Marion County. For the past four years, the TPO Board had opted to follow the same approach of reviewing prior year target results, and adopting revised targets tied to a specific methodology involving five-year rolling averages and projected vehicle miles traveled (VMT).

The TPO’s Target Setting Methodology was as follows:

1. Calculate Average Percent Change of the three most recent five-year rolling averages
   - #1 Fatalities
   - #3 Serious Injuries
   - #4 Non-motorized Fatalities and Serious Injuries

2. Project the Vehicle Miles Traveled (VMT) in 2021 and 2022 to calculated:
   - #2 Fatality rate per 100 Million VMT
   - #4 Serious Injury rate per 100 Million VMT
Two options were provided to the committee:

**Option A**

- Adopt 2022 Targets based on current methodology.
- Staff explore crash reduction factors for 2023 targets as part of Commitment to Zero.

**Option B**

- Adopt 0 for all five targets to reflect State Targets and Commitment to Zero.
- Staff explore crash reduction factors for 2023 targets as part of Commitment to Zero.

With the understanding that when an MPO/TPO adopts State Targets, no changes can be made unless FDOT changes the State Targets.

*The presentation that was given is attached to pages 26-49 of this set of minutes for reference.*

The committee had discussion on the safety targets.

Mr. Neal asked where money came from to fund the safety projects.

Mr. Balmes said that on the federal level there were discretionary grants for safety programs and safety planning projects. There would also be more opportunities through FDOT as well.

Mr. Burgett said that the safety office had taken on educational opportunities on educating the public on safety.

*Mr. Neal made a motion to adopt Option A for the Performance Measures Safety Targets.*

*Mr. Smith seconded, and the motion passed unanimously.*

**Item 5. Consent Agenda**

*Mr. Neal made a motion to approve the Consent Agenda. Mr. Odom seconded, and the motion passed unanimously.*

**Item 6. Comments by FDOT**

Mr. Burgett provided an updated construction report and gave an update on US 441 resurfacing and said that the lane closures under the bridge would be opening soon with completion of the median work within a week weather permitting. The project was anticipated to be completed in the fall.

**Item 7. Comments by TPO Staff**

Mr. Balmes informed the committee that the 2021 TPO Annual Report was posted on the TPO’s website to view https://ocalamariontpo.org/about-us/annual-report/. The Annual Report summarized the TPO program accomplishments in Ocala/Marion County in calendar year 2021. The report also included boards and committee leadership, along with major projects funded through the TPO process. To honor the TPO’s 40th anniversary, a special timeline section was developed to highlight some of the major organizational milestones from 1981 to 2021.
Also on January 12, 2022, the TPO kicked-off Commitment to Zero: An Action Plan for Safer Streets in Ocala Marion. Commissioner Stone led the meeting, which included participation by Mayor Guinn as a speaker. Several local safety leaders also participated as speakers at the meeting, including Lieutenant Eades and Sergeant McDonald of the Ocala Police Department, Battalion Chief Driggers of Marion County Fire Rescue and Ken Odom, Chair of the Community Traffic Safety Team. Loreen Bobo, Administrator of the FDOT Office of Safety also presented.

The TPO and consultant team (Benesch, Inc.) presented an overview of the Commitment to Zero project, including the schedule and how the public can get involved throughout the process. This included both an online public survey and comment map regarding safety concerns in Marion County. The meeting was video-recorded. The online public tools and link to the kick-off meeting recording are available at the Commitment to Zero project page: https://ocalamariontpo.org/safety-plan.

Mr. Balmes asked the committee to share the project page for opportunities for public comment with constituents, diversity of feedback would be critical to the success of the project.

**Item 7. Comments by TAC Members**

Mr. Slattery asked if the overall number of reported accidents compared to fatality and serious injury rates. Also, if there were certain times of years that accidents fluctuated.

Mr. Balmes said that those details were being looked at by the consultants through the planning effort of the Commitment to Zero. Those numbers would be presented to the committee at an upcoming meeting.

**Item 8. Public Comment**

*There was no public comment.*

**Item 9. Adjournment**

Chairman Thomason adjourned the meeting at 4:37pm.

Respectfully Submitted By:

Shakayla Irby, TPO Administrative Assistant
TRANSPORTATION RESILIENCY GUIDANCE

FEBRUARY 2022
AGENDA

- What is Resiliency?
- National guidance
- Funding opportunities
- Vulnerability analysis
- Resiliency strategies
- Next steps
Transportation Resiliency

Is it relevant to Marion County, FL?

The Federal Highway Administration defines resiliency as:

the ability to anticipate, prepare for, and adapt to changing conditions and withstand, respond to, and recover rapidly from disruptions
Disruptions can include natural and man-made disasters

- Flooding
- Wildfires
- Tornados
- HazMat incidents
- Sinkholes
- Traffic crashes
Resiliency Requirements

Resilience planning was first introduced into federal transportation legislation 10 years ago.

- **2012**: Moving Ahead for Progress in the 21st Century (MAP-21)
  - Added eligibility of “protection against extreme events” to funding programs

- **2015**: Fixing America’s Surface Transportation Act (FAST Act)
  - Formalizes resilience consideration into transportation planning

- **2021**: Infrastructure Investment & Jobs Act (II&J)
  - Allocates $47 billion to infrastructure resilience
In 2021, Governor DeSantis signed the first piece of legislation dedicated to resiliency planning in Florida.

- Federal Infrastructure Investment & Jobs Act: $8.7 b
- Building Resilient Infrastructure & Communities (BRIC): $1.0 b
- Flood Mitigation Assistance (FMA): $3.5 b
- Resilient Florida Grant Program: $20 m
- Statewide Flooding and Sea Level Rise Resilience
PEER AREA RESILIENCY EFFORTS

1. Define hazards
2. Identify critical roadways
3. Assess vulnerabilities
4. Develop mitigation strategies
5. Specify funding sources

Completed 2 steps
Completed 3 steps
Completed 4 or 5 steps
# Peer Area Resiliency Efforts

1. Define hazards
2. Identify critical roadways
3. Assess vulnerabilities
4. Develop mitigation strategies
5. Specify funding sources

These drivers were used to form four scenarios, to help guide the planning and needs assessment.</td>
<td></td>
</tr>
</tbody>
</table>
Vulnerability analysis

**Wildfires** – 960 square miles in Marion County are prone to wildfires

**Flooding** – 315 square miles in Marion County are prone to flooding

**Sinkholes** – 803 sinkholes in Marion County between 2015 and 2020
Exposure analysis

Spatial analysis of the relationship between shock/stressors and federal aid eligible network. Analysis completed separately for evacuation network as well.
WILDFIRE exposure

Federal Aid Eligible Roadways exposure

- 78 miles of principal arterials
- 38 miles of minor arterials
- 116 miles of major collectors
- 23 miles of minor collectors
- 255 total miles of roadways
  35% of system
FLOODING exposure

Federal Aid Eligible Roadways exposure

- 125 miles of principal arterials
- 56 miles of minor arterials
- 151 miles of major collectors
- 100 miles of minor collectors
- 436 total miles of roadways
  60% of system
SINKHOLE exposure

Federal Aid Eligible Roadways exposure

- 37 miles of principal arterials
- 21 miles of minor arterials
- 6 miles of major collectors
- 21 miles of minor collectors
- 86 total miles of roadways
  12% of system
Types of Strategies

**Prevention** – Improvements that reduce likelihood of impact to the system

**Adaptation** – Improvements that adjust Minimize impacts

**Absorption** – Improvements that fortify the system against shocks and stressors

**Restoration** – Improvements that facilitate restoration of normal function after impacts.
# PREVENTION STRATEGIES

Prevention: Strategies that reduce the likelihood of a shock or stressor impacting the system.

# ABSORPTION STRATEGIES

Absorption: Strategies that help the system function normally during events that cause shocks and stressors.

| Conduct regular maintenance of infrastructure | Maintain the working order of infrastructure, for example keeping culverts clear. | - Proactive measure to maintain flow at critical points  
- Maintain clear of overgrown vegetation which may spread wildfire across the roadway | - South Florida Climate Pilot  
- Houston Galveston Resilience Pilot Program |
| Construct hardened shoulders | Widen roadway structure to reduce impact to travel lanes. | - Requires clearance around roadway  
- Along roadways experiencing strong flows  
- Limit inundation to one side of roadway  
- Reduce erosion from overtopping | - Resilient Tampa Bay  
- Houston Galveston Resilience Pilot Program |
| Use permeable pavements | Slobs, filters, and cleans stormwater runoff by installing porous surfaces. | - Especially relevant in areas with large parking lots  
- Appropriate only for gentle slopes  
- Can become clogged  
- Appropriate for low traffic volumes, loads, and speed  
- Reduce runoff  
- Allow water to infiltrate  
- Reduced particulates in water | - Resilient Tampa Bay  
- Houston Galveston Resilience Pilot Program |
| Construct enhanced road surface | For flooding: Increase the thickness of hot mix asphalt (consider increasing 2") and binder course using larger aggregate. For heat and wildfire: Design road with materials resistant to fire and heat. | - Resist water movement and inundation  
- Withstand impacts of prolonged exposure to heat or submersion | - Resilient Tampa Bay  
- Resilient California  
- Houston Galveston Resilience Pilot Program |
| Construct enhanced sub-surface | Increase the thickness of subbase layers to provide additional drainage, structural strength, and resistance to flow damages (consider increasing 4-6"). | - Resist water movement and inundation | - Resilient Tampa Bay  
- Houston Galveston Resilience Pilot Program |
| Construct berms or barriers | Construct a barrier to prevent water from flooding the roadway. | - Consider available right-of-way to construct barrier  
- Prevent water from reaching roadway or flowing across roadway | - FHWA Adaptation Framework  
- Resilient Tampa Bay  
- Houston Galveston Resilience Pilot Program |
| Construct protected or depressed medians | Separate the roadway and potential effect of inundation with a median between the travel lanes in each direction. | - Especially effective along roadways in flat areas  
- Requires maintenance of vegetation and keeping drains clear  
- Reduce the occurrence of floods across the full roadway  
- If depressed, serve as a holding area for water | - Resilient Tampa Bay  
- Houston Galveston Resilience Pilot Program |

**Legend**

- Wildfire
- Flood
- Tornado
- Low cost
- Medium cost
- High cost
RESTORATION STRATEGIES

**Restoration: Strategies that help the system recover quickly and return to normal functioning.**

- **Install generator connections at traffic signals:** Provide built-in connections on signal cabinets to connect a generator.
  - Battery capacity and need for replacement or installation of a generator
  - Quickly resume operations after shock
  - Space Coast TPO Resiliency Master Plan

- **Prioritize roadways:** Prioritize roadways based upon network effectiveness. In all response activities focus on roadways in priority order, for example send crews to clear debris from priority roadways before non-priority roadways.
  - Include community input regarding critical routes and facilities
  - Clear and defined plan that can be communicated to the community
  - Resilient California

- **Develop warning systems with resilient communications:** Warning system may consist of sensors, cameras, citizen reporting tools, or other means.
  - Quickly alert of hazard to allow response to occur
  - Houston Galveston Resilience Pilot Program

- **Develop a coordination plan with other agencies to respond to changes and hazards:**
  - Continue to operate transit in a predetermined manner consistent with rider expectations.
  - Resilient California

- **Coordinate with transit providers to identify alternative routes and stops if normal infrastructure is impacted:**

- **Establish standby contracts for damage response:** Establish mechanisms to pay for rapid response to hazards.
  - Proactive measure to reduce the length of impact.
  - FHWA HOP-15-025

- **Stockpile materials (culvert pipe, fuel, components) and equipment (generators, traffic control devices) at appropriate locations:** Maintain an inventory of critical materials to quickly respond to needs during and after shocks.
  - Different materials will be needed at different locations to address each hazard
  - Consider in conjunction with prioritized roadways
  - Consider cost of storage and potential deterioration of materials over time
  - Proactive measure to reduce the length of impact.
  - FHWA HOP-15-025

**Legend:**
- General
- Heat
- Wildfire
- Flood
- Tornado
- Low cost
- Medium cost
- High cost
Incorporating Resiliency into planning processes

- Project level planning/development
- Hazard data collection
- Scenario planning analysis
- Identification of critical facilities
- Identification and prioritization of needed resiliency improvements

*Due to the 2020 anomaly year, TPO used projections from 2014 to 2019 to obtain historical VMT growth rate.

VMT data for Marion County provided by Florida Department of Transportation

The MVMT equate to an overall Billion VMT

i.e. 47.2 Million Vehicle Miles Traveled (MVMT) = 4.72 Billion VMT
Proposed 2022 Targets

Option A

• Adopt 2022 Targets based on current methodology.

• Staff explore crash reduction factors for 2023 targets as part of Commitment to Zero.
Option B

• Adopt 0 for all five targets to reflect State Targets and Commitment to Zero.

• Staff explore crash reduction factors for 2023 targets as part of Commitment to Zero.

Note: When an MPO/TPO adopts State Targets, no changes can be made unless FDOT changes the State Targets.
